

Software Engineer

Professional Summary

Backend Software Engineer with experience in large-scale systems processing millions of daily transactions. Bachelor's degree in Computer Science from the Federal University of Lavras (UFLA), currently pursuing a Master's degree at the same institution. Proficient in Java, Kotlin (Spring Boot), TypeScript (Angular), and Python, with expertise in microservices architectures, messaging (Kafka, SQS), SQL/NoSQL databases, and observability practices. Strong analytical skills, clear communication, and focus on building robust and scalable solutions.

Professional Experience

iFood

Backend Software Engineer

📅 Jan/2026 – Present

📍 Remote

- Develop and maintain microservices in Kotlin and Spring Boot on the payments platform, responsible for services processing over 6 million transactions per day.
- Integrated the iFood and Uber platforms, contributing to systems interoperability and feature expansion for millions of users.
- Implement and maintain financial services, including payment methods, reconciliation, and acquirer integrations.
- Develop unit and integration tests with JUnit and Kotest, ensuring quality and reliability in high-availability environments.
- Monitor and resolve production incidents using Datadog, analyzing metrics, logs, and traces to maintain availability SLAs.
- Design solutions with asynchronous communication (Kafka, SQS) and distributed architectures, applying hexagonal architecture, DDD, and CQRS.
- Manage containerization with Docker and orchestration with Kubernetes in AWS environments.
- Execute deployments with canary release strategies, reducing risks and ensuring safe rollbacks in production.

iFood

Software Engineering Intern

📅 Feb/2025 – Dec/2025

📍 Remote

- Developed and maintained backend APIs in Kotlin and Spring Boot for large-scale payment systems.
- Automated failed card retokenization via Python script executed by cron job, increasing card recovery rate and operational efficiency.
- Configured and supported payment methods and acquirer integrations.
- Implemented automated tests and supported production service monitoring with Datadog.
- Worked with asynchronous communication (Kafka) and distributed systems in a microservices architecture.

Emakers Jr

Backend Developer

📅 Jun/2023 – Apr/2025

📍 Lavras - MG

- Developed and maintained the backend of the Redação Inteligente system, a course management and essay grading platform with thousands of active users.
- Migrated the payment integration from PagBank to Mercado Pago, including Pix support, increasing reliability and modernizing the billing system.
- Led the backend architecture evolution, migrating from AdonisJS to Java with Spring Boot and from MySQL to PostgreSQL.
- Developed internal solutions for platformizing people management and recruitment processes, optimizing organizational operational efficiency.
- Created technical materials and training (Markdown documentation and video courses) for internal backend technology upskilling.

- Developed fullstack features with Java (Spring Boot) and Angular (TypeScript) on the Mercap Solutions platform for fixed-income product distribution.
- Implemented mailing automation with market updates, increasing platform user engagement.
- Developed modules for data management and institutional offer video delivery.
- Built features for automated spreadsheet generation and download, optimizing the offer registration and management process.

Education

Federal University of Lavras (UFLA)
Master's in Computer Science

📅 2026 – Present
📍 Lavras - MG

Federal University of Lavras (UFLA)
Bachelor's in Computer Science

📅 2022 – 2025
📍 Lavras - MG

Federal Center for Technological Education of Minas Gerais (CEFET-MG)
Technical Diploma in Information Technology

📅 2019 – 2021
📍 Varginha - MG

Technical Skills

- **Languages:** Java, Kotlin, Python, TypeScript, C/C++.
- **Frameworks:** Spring Boot, Angular, React.
- **Architecture:** Microservices, Hexagonal Architecture, DDD, CQRS, REST APIs, distributed systems.
- **Messaging:** Apache Kafka, AWS SQS/SNS.
- **Databases:** PostgreSQL, MySQL, Redis, NoSQL databases.
- **Testing:** JUnit, Mockito, Kotest, unit and integration testing.
- **DevOps & Cloud:** Docker, Kubernetes, AWS, CI/CD, canary release, Linux.
- **Observability:** Datadog, Grafana, Prometheus, log, metrics and trace analysis.
- **Tools:** Git, GitHub, GitLab, IntelliJ IDEA.
- **Data Processing:** Pandas, Apache Spark.
- **Methodologies:** Scrum, Kanban.
- **Languages:** Portuguese (native), English (advanced).
